AIREEFAB

Long-lasting Preformed Marking for Airfields

AIREEFAB is a durable preformed thermoplastic road marking material for airfields which is prefabricated based on ICAS 114, ANNEX 14, and FAA (Federal Aviation Administration) standards. AIREEFAB is well suited for markings like taxiway, holding position, geographic position, service road, hook barrier, and parking.

F

AIREEFAB is supplied at 2-mm thickness and it is ready to be positioned onto the concrete or asphalt pavement surface. Application requires AIREEFAB primer and a heat torch. Glass beads are intermixed through the material and distributed on its surface uniformly. The area can be reopened to traffic within 15 minutes after application. Removal is easy using waterblasting.

AIREEFAB performs very well against airplane rubbers. The below picture have been taken after 2 months in Shahid Behesti Airport runway. It is observed that the rubbers have changed the surface of the asphalt but it does not have a noticeable impact on AIREEFAB surface.

Applications

Service Road Marking

Service Road Marking

Hook Barrier Marking

Holding Position Marking

Taxi Guideline Marking
